Applied Intelligence

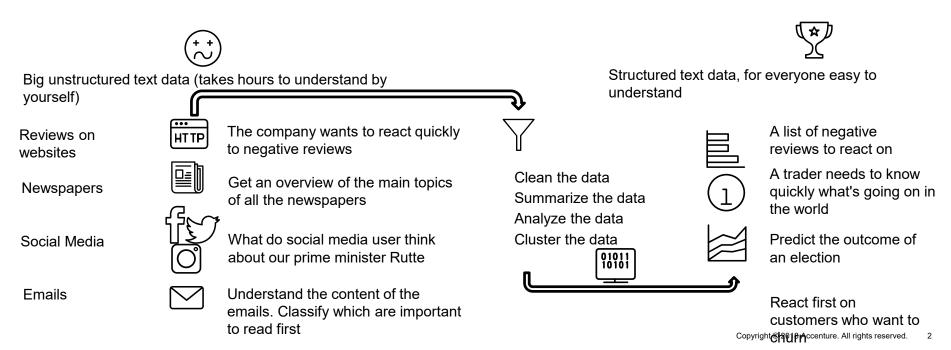

TIDY TEXT MINORKSHOP R LADIES

INTRODUCTION INTO TEXT MINING

Process unstructured textual information

Turn text into computer-readable numbers. Summarize, analyze these numbers and use the outcomes as input for predictive data mining or clustering.

Agenda

- Introduction to the client
- The data set
- After this workshop you are able to:
 - Text mining the tidy way!
 - Extract strings from text files
 - Gather the most common words from text files
 - Bring words back to its stem (e.g. waits, waited
 → wait) and tokenize words (wait is a

- Tips and tricks to clean the data
- Derive the sentiment of the text
- Translate the insights into business value
- Further examples

THE CASE

What are the strengths and weaknesses of United Airlines compared to other airlines based on social media posts?

TWITTER DATA

14640 tweets from 7700 users (February 2015)

tweet_id	text
	@VirginAmerica seriously would pay \$30 a flight for seats that didn't have this playing. it's really the only bad thing about flying
570306133677760000	VA
570301130888122000	@VirginAmerica - the passenger in 7D, Flt 338 that assaulted me shouldn't have flown. I trust he's banned. Crew filed report to @FAANews
570301083672813000	@VirginAmerica soooo are you guys going to leave the seatbelt light on all flight? You can barely call this turbulence :-)
570301031407624000	@VirginAmerica I am in seat 4C and I cannot even open my laptop
570300817074462000	@VirginAmerica does Virgin America fly direct from Seattle to NYC or Boston?
570300767074181000	@united crashed trying to check in.
570300616901320000	@united YOU GUYS ARE HORRIBLE.
570300248553349000	@united Could you update me on the suitcase please? The online and phone tracking told me nothing. I was told I'd have it back yesterday!
570299953286942000	@united Reallyyou charge me \$25 to check a bag and then you put it on a different flightstill Don't have my bag!!!

STEP 1: OPEN R-STUDIO & GET STARTED

Check if you have Wi-Fi

Type the following code at the beginning of your R

options(stringsAsFactors = F) options(scipen = 999)

Check if you have to following packages

Check if you have the following

Datasets

twitter_airline_sentiment.csv

df_airlines.feather

df_mini.feather

tidy_lemma.feather

tidy lemma time.feather

Library(tidyverse)

Library(tidytext)

Library(udpipe)

Library(feather)

To-

CSV

read in the first csv file

"twitter_airline_sentiment.csv"

Get a small book with code, it will guide you through the assignments

Use a notebook! They are fun!

THE FEATHER PACKAGE

Imports: Rcpp, tibble, hms

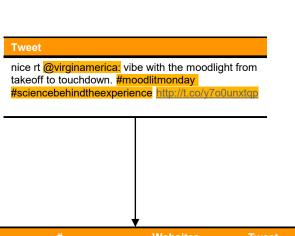

Why we use it	Function
 Load csv files faster, Data format remains the same, Load the data in different programming languages (e.g. python) 	read_feather(path, columns = NULL)
	write_feather(x, path)

THE TIDYVERSE PACKAGE

Imports: Broom, cli, crayon, **dplyr**, dbplyr, forcats, **ggplot2**, haven, hms, httr, jsonlite, lubridate, magrittr, modelr, purrr, **readr**, ,readxl\n(>=, reprex, rlang, rstudioapi, rvest, **stringr**, tibble, tidyr, xml2, tidyverse

Package	Why we use it	Function
readr	Load the data	read_csv("namefile.csv")
dplyr	To write in the tidy way	%>%
stringr	Extract strings from the text	str_extract_all(texst,regexp)
ggplot2	Visualize the outcomes	ggplot(aes(x, y))

STEP 2: EXTRACT SPECIFIC STRINGS FROM THE TWEETS BY USING REGEX (A SEQUENCE OF CHARACTERS THAT DEFINE A SEARCH PATTERN)

Load the data: twitter_airline_sentiment.csv

Use the function:

str_extract_all(text, "regexp")
From the package tidyverse

Try to extract:

- 1. All digits
- 2. The airlines (@)

Tip: Try one tweet first

Time: 10 min

Airline	#	Websites	Tweet
virginamerica	#moodlitmonday #sciencebehindt heexperience	http://t.co/y7o0u nxtqp	nice rt @virginamerica: vibe with the moodlight from takeoff to touchdown. #moodlitmonday #sciencebehindt heexperience http://t.co/y7o0u

Regexp	Matches
\t	tab
\s	Any whitespace
\S	Non whitespace
\d	Any digit
\w	Any word character
[:digit:]	digits
[:alpha:]	letters
[:lower:]	lowercase
[:upper:]	uppercase
[:punct:]	punctuation
[:space:]	space
a+	One or more
(?<=b)a	preceded by

Example: (?<=#)\\w+ → get one or more word characters after the #

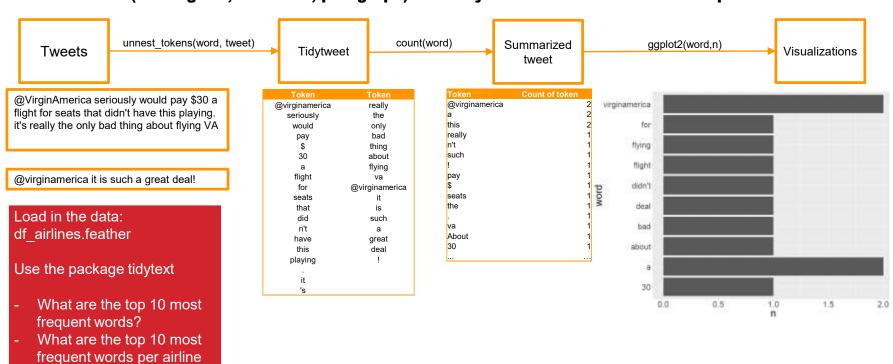

THE TIDYTEXT PACKAGE

Imports: Rlang, dplyr, stringr, hunspell, broom, Matrix, tokenizers, janeaustenr, purrr (>= 0.1.1), methods, stopwords

Package	Why we use it	Function
tokenizers	Splitting text into tokens	unnest_tokens(input, token = "words")
tokenizers	Get the sentiment of a text	get_sentiments(lexicon = c("afinn", "bing", "nrc", "loughran"))
stopwords	To remove unnecessary words	get_stopwords(language = "en", source = "snowball")

STEP 3: GET THE MOST COMMONLY USED WORDS

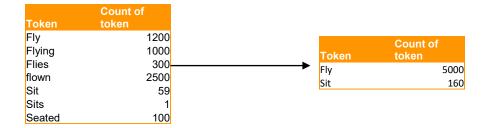

The tidytext package transforms the text into a tidy text format (splitting the text into tokens). A token can be a word (or a n-gram, sentence, paragraph). The tidy text format has a one-token-per-row structure.

Visualize your outcomes!

Time: 10 min

ALL THE INFLECTED FORMS OF A WORD ARE NOT INFORMATIVE EITHER

STEP 4: LEMMATIZATION & TAGGING

Lemmatization: grouping together the inflected forms of a word

@VirginAmerica seriously would pay \$30 a flight for seats that didn't have this playing. it's really the only bad thing about flying VA

	*	
Token	Lemma	Tagging
@virginamerica	@virginamerican	AUX
seriously	seriously	ADV
would	would	AUX
pay	pay	VERB
\$	\$	SYM
30	30	NUM
a	а	DET
flight	flight	NOUN
for	for	ADP
seats	seat	NOUN
that	that	PRON
did	do	AUX
n't	not	PART
have	have	VERB
this	this	DET
playing	Play	NOUN
•	•	PUNCT
it	it	PRON
's	be	AUX
really	really	ADV
the	the	DET
only	only	ADJ
bad	bad	ADJ
thing	thing	NOUN
about	about	SCONJ
flying	fly	VERB
va	va	NOUN

Universal Pos Tags (Upos)	Definition	Examples
ADJ	adjective	big, old, green
ADP	adposition	in, to, during
ADV	adverb	very,well, exactly, tomorrow, up, down
AUX	auxiliary	has, is, will, was, got, should, can
CCONJ	coordinating conjunction	and, or, but
DET	determiner	this, which, the
INTJ	interjection	psst, ouch, bravo, hello
NOUN	noun	girl, cat, air
NUM	numeral	0, 1, 2, three
PART	particle	ʻs, n't
PRON	pronoun	I, you, he, she, we, they, what, my
PROPN	proper noun	Mary, John, America
PUNCT	punctuation	.?!
SCONJ	subordinating conjunction	that, if, while
SYM	symbol	\$, #, ;)
VERB	verb	run, eat, fly
Χ	other	dwqjdwo dwqo

THE UDPIPE PACKAGE

Imports: Rcpp (>= 0.11.5), data.table (>= 1.9.6), Matrix, methods

Why we use it	Function
Choose a language and download it (52 different languages)	udpipe_download_model(language = c("afrikaans", "ancient_greek-proiel", "ancient_greek", "arabic", "basque", "belarusian", "bulgarian", "catalan", "chinese", "coptic", "croatian", "czech-cac", "czech-cltt", "czech", "danish", "dutch-lassysmall", "dutch", "english-lines", "english-partut", "english", "estonian", "finnish-ftb", "finnish", "french-partut", "french-sequoia", "french", "galician-treegal", "galician", "german", "gothic", "greek", "hebrew", "hindi", "hungarian", "indonesian", "irish", "italian", "japanese", "kazakh", "korean", "latin-ittb", "latin-proiel", "latin", "latvian", "lithuanian", "norwegian-bokmaal", "norwegian-nynorsk", "old_church_slavonic", "persian", "polish", "portuguese-br", "portuguese", "romanian", "russian-syntagrus", "russian", "sanskrit", "serbian", "slovak", "slovenian-sst", "slovenian", "spanish-ancora", "spanish", "swedish-lines", "swedish", "tamil", "turkish", "ukrainian", "urdu", "uyghur", "vietnamese")
To lemmatize and tokenize	udpipe_annotate(object, x, doc_id = paste("doc", seq_along(x), sep = ""), tokenizer = "tokenizer", tagger = c("default", "none"), parser = c("default", "none"), trace = FALSE,)

NOW TRY IT YOURSELF!

Use the "udpipe" package

Use the following code:

load the tagging models

dl <- udpipe_download_model(language = "english") udmodel_english <- udpipe_load_model(file = "english-ud-2.0-170801.udpipe")

load the data

df_mini <- read_feather("df_mini.feather")
df_mini\$text[1]</pre>

do for one tweet

 $lemma_example <- udpipe_annotate(udmodel_english, x = df_mini$text[1], doc_id = df_mini$tweet_id[1], parser = "none", tagger = "default ", trace = FALSE) str(lemma_example)$

in a tidy format and add airline

lemma_example <- as.data.frame(lemma_example) %>% mutate(airline = df_mini\$airline[1])

View(lemma_example)

Experiment with 7 tweets: which Upos are good to keep, which are less important. Clean up the data as good as possible!

Time: 15 min

Universal Pos Tags (Upos)	Definition	Examples
ADJ	adjective	big, old, green
ADP	adposition	in, to, during
ADV	adverb	very,well, exactly, tomorrow, up, down
AUX	auxiliary	has, is, will, was, got, should, can
CCONJ	coordinating conjunction	and, or, but
DET	determiner	this, which, the
INTJ	interjection	psst, ouch, bravo, hello
NOUN	noun	girl, cat, air
NUM	numeral	0, 1, 2, three
PART	particle	's, n't
PRON	pronoun	I, you, he, she, we, they, what, my
PROPN	proper noun	Mary, John, America
PUNCT	punctuation	.?!
SCONJ	subordinating conjunction	that, if, while
SYM	symbol	\$, #, ;)
VERB	verb	run, eat, fly
Χ	other	dwqjdwo dwqo

STEP 5: VISUALIZE THE CLEANED DATA

Look again at the commonly used words, do you see any improvement?

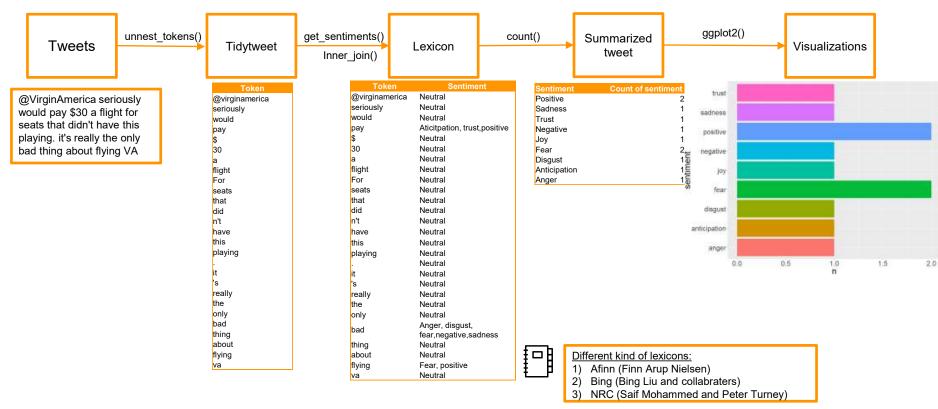

Data: tidy_lemma.feather

Open the cleaned data set and test whether the top most common 10 words (per airline) are more informative now. Visualize your outcomes!

Time: 5 min

SENTIMENT ANALYSIS

Approach the emotional content of a text programmatically

STEP 6: FIND THE SENTIMENT OF THE TWEETS!

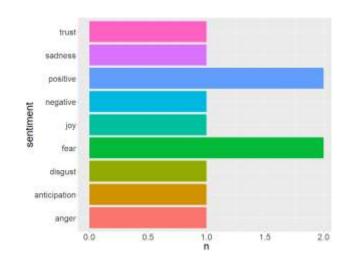

Use the code below

Load the data: tidy_lemma.feather

Use the package tidytext.

For every airline; What is % of positive and negative sentiment with the NRC dictionary. Visualize your outcomes!

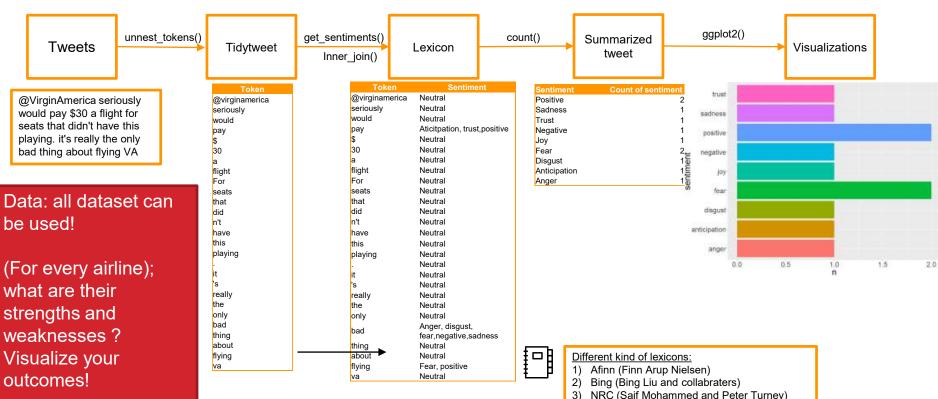

Time: (10 min)

tidy_tweet <- data_set %>% select(text)%>% select(text)%>% sentiments <- get_sentiments("nrc") %>% count(sentiment,)%>% ggplot(aes(sentiment, n, fill = sentiment))+ geom_col(show.legend = F)+ coord_flip

SENTIMENT ANALYSIS

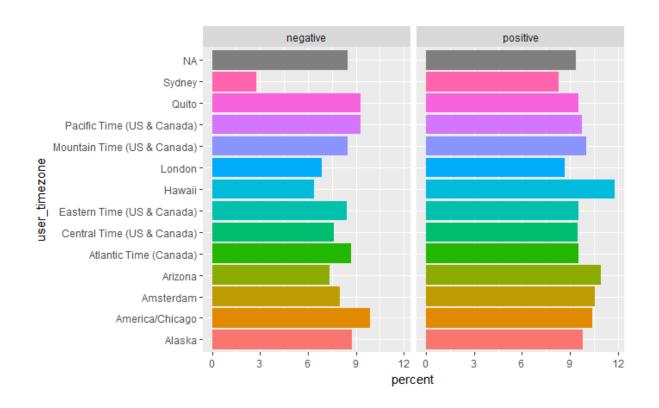

Approach the emotional content of a text programmatically

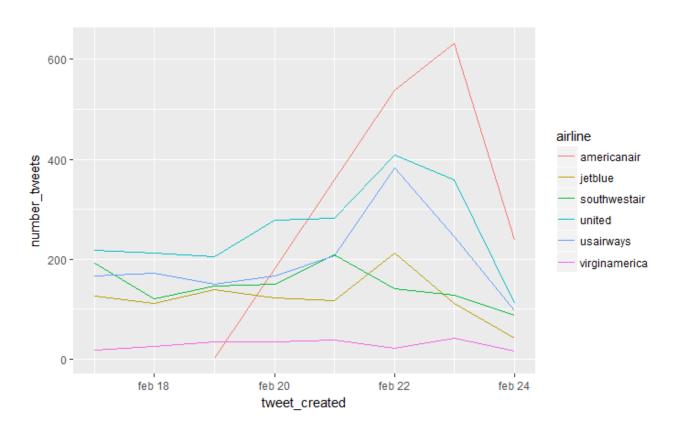

Time: (25 min)

FURTHER EXAMPLES

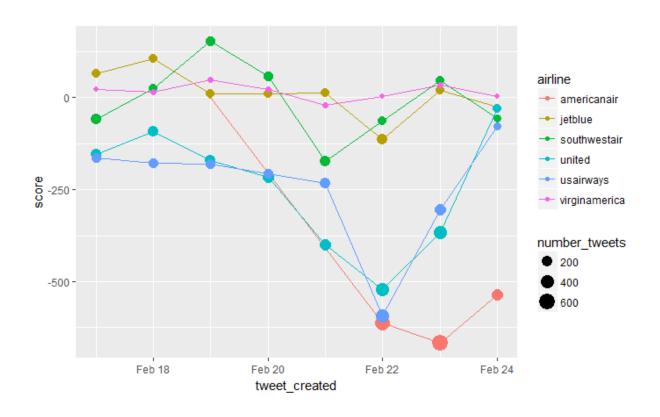

SENTIMENT ANALYSIS OUTCOME (USER TIMEZONE)

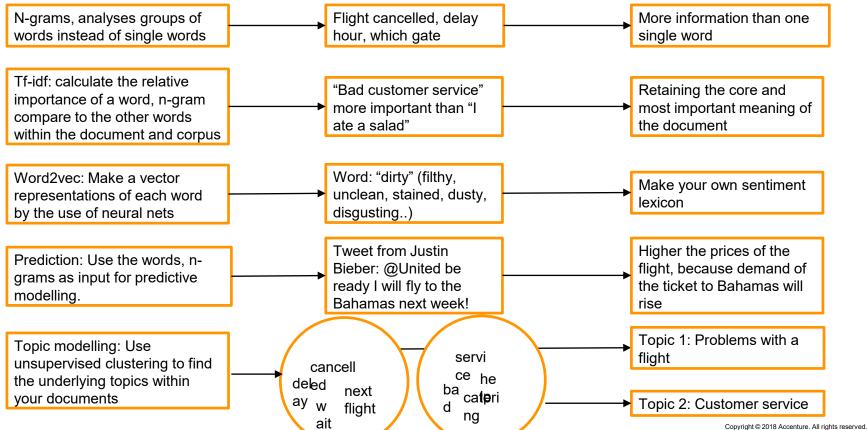

NUMBER OF TWEETS OVER TIME (PER AIRLINE)

SENTIMENT OF TWEETS OVER TIME (PER AIRLINE)

Learn how to analyze social media texts and gather useful insights for the client !!

TIDY TEXT MININ WORKSHOP R LADIES

17th July 2018, 17.30-21.30 Room

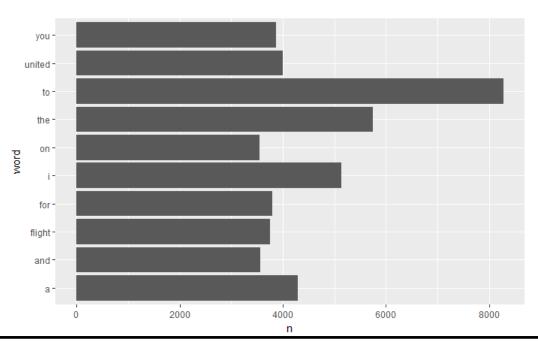

Laury van Bedaf

Eline Tjeng

Join us for the hands- on workshop. We will introduce you to the essential techniques of text mining! Sign op via: https://www.meetup.com/rladies-amsterdam/events/251586233/

MOST FREQUENT WORDS

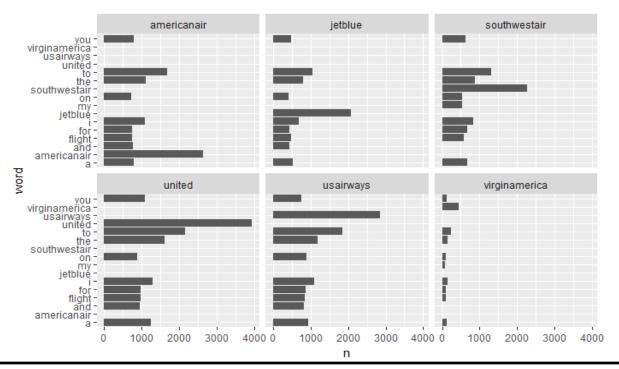

The top 10 words are not very informative

tidy_tweet <- data_set %>% select(text) %>% unnest_tokens(word, text) %>% count(word) %>% arrange(-n)%>% slice(1:10)%>% ggplot(aes(word, n))+ geom_col()+ coord_flip()

MOST FREQUENT WORDS PER AIRLINE

The top 10 words per airline are not very informative

tidy_tweet <- data_set %>% select(airline,text) %>% unnest_tokens(word, text) %>% count(airline,word) %>% arrange(airline,-n)%>% group_by(airline)%>% slice(1:10)%>% ggplot(aes(word, n))+ geom_col()+ facet_wrap(~airline)+ coord_flip()

WHAT DID WE DO: CLEANING THE DATA IS AN ITERATIVE PROCESS

Step 1: Clean up uninformative Upos

Universal Pos Tags	Definition	Examples
(Upos)	Deminion	Examples
ADJ	adjective	big, old, green
ADP	adposition	in, to, during
ADV	adverb	very,well, exactly, tomorrow, up, down
AUX	auxiliary	has, is, will, was, got, should, can
CCONJ	coordinating conjunction	and, or, but
DET	determiner	this, which, the
INTJ	interjection	psst, ouch, bravo, hello
NOUN	noun	girl, cat, air
NUM	numeral	0, 1, 2, three
PART	particle	's, n't
PRON	pronoun	I, you, he, she, we, they, what, my
PROPN	proper noun	Mary, John, America
PUNCT	punctuation	<mark>.?!</mark>
SCONJ	subordinating conjunction	that, if, while
SYM	symbol	\$, # , ;)
VERB	verb	run, eat, fly
X	other	dwqjdwo dwqo

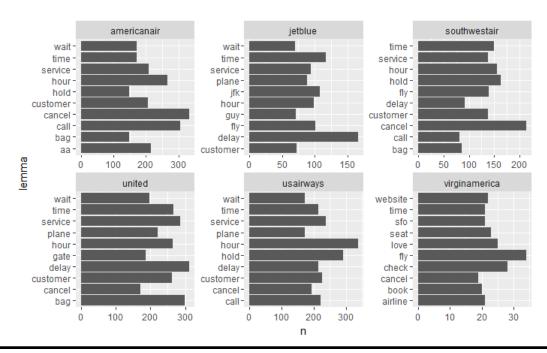

Step 2: Still words you want to remove? Create a blacklist!

Blacklist
americanair
jetblue
jet blue
united
unit
virginamerican
aa
usairway
southwestay
t.co

Step 3: Remove the last unwanted punctuation, digits and stop words

Regex [:punct:]|[:digit:]
:
Tidytext stop_word
: s

MOST FREQUENT WORDS PER AIRLINE

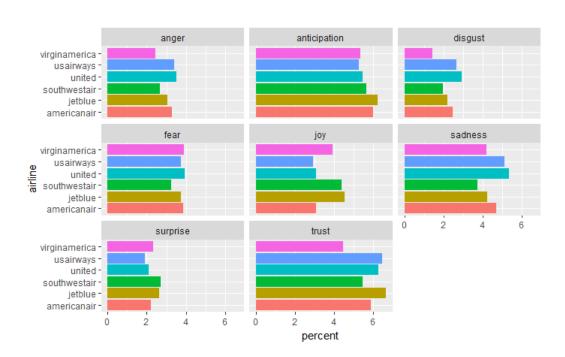

- American Air &
 Southwest Air problems with canceled flights?
- 2) Jetblue and United have a lot of delays?
- 3) United airlines have luggage problems?
- 4) Virgin America problems with their website?

tidy_tweet <- data_set %>% select(airline,text) %>% unnest_tokens(word, text) %>% count(airline,word) %>% arrange(airline,-n)%>% group_by(airline)%>% slice(1:10)%>% ggplot(aes(word, n))+ geom_col()+ facet_wrap(~airline)+ coord_flip()

SENTIMENT ANALYSIS OUTCOME

sent_nrc <- get_sentiments("nrc")%>%
filter(!sentiment %in% c("positive", "negative"))

SENTIMENT ANALYSIS OUTCOME
